0134673522 9780134673523 Interactive Statistics: Informed Decisions Using Data, Student Access Kit, 2/e. Many health care practitioners and researchers are aware of the need to employ factor analysis in order to develop more sensitive instruments for data collection. Unfortunately, factor analysis is not a unidimensional approach that is easily understood by even the most experienced of researchers. Making Sense of Factor Analysis: The Use of Factor Analysis for Instrument Development in Health Care Research presents a straightforward explanation of the complex statistical procedures involved in factor analysis. Authors Marjorie A. Pett, Nancy M. Lackey, and John J. Sullivan provide a step-by-step approach to analyzing data using statistical computer packages like SPSS and SAS, emphasizing the interrelationship between factor analysis and test construction. The authors examine numerous practical and theoretical decisions that must be made to efficiently run and accurately interpret the outcomes of these sophisticated computer programs. This accessible volume will help both novice and experienced health care professionals to increase their knowledge of the use of factor analysis in health care research, understand journal articles that report the use of factor analysis in test construction and instrument development, create new data collection instruments, examine the reliability and structure of existing health care instruments, interpret and report computer-generated output from a factor analysis run, and make sense of factor analysis. The use of factor analysis for instrument development in health care research offers a practical method for developing tests, validating instruments, and reporting outcomes through the use of factor analysis to facilitate learning. The authors provide concrete testing examples, three appendices of additional information, and a glossary of key terms. Ideal for graduate-level nursing students, this book is also an invaluable resource for health care researchers.

Written for undergraduate and graduate students with little or no mathematical background, *Biostatistics for Population Health: A Primer* offers current and future health professionals a clear and accessible approach to learning the basic tools and techniques necessary to conduct biostatistical analyses and the professional confidence to critically evaluate and interpret biostatistical findings. Each unit begins with a contemporary population health issue, e.g., the opioid crisis, physical inactivity among children, diabetes, and raises questions that require the use of techniques discussed in that unit. Each technique, in turn, is illustrated with realistic contemporary examples, e.g., vaping, to pique student interest. By the end of the unit, students are encouraged to apply the techniques to address the questions that were raised.
