as interest among ordinary investors seeks quick and secure ways to improve their portfolios alternatives may be yours a new interest but the concept behind options has been around for millennia many people understand stock holding purchasing and selling and let's get going there you can purchase or sell such shares so depending on the number of shares you own you can receive dividends you own specific properties or stakes an option is the possibility of buying stock from the company at a specified price and time but not the obligation in other words if you want to and don't want to you should you don't own any of the company's shares however you may options are rare in the financial trading sector it's easy to understand buying and selling stock in a company but trading is a bit more complicated it's a bit difficult to work out how you can sell those shares before you purchase them and even make a profit from the price drop there's more to it than simple choices derivatives are a good example it means you can buy things from other things by deriving the value to them for example if you consider a potential contract you will find that the cost of that contract increases as the market price underlies and varies if this is the case you will use the derivatives to function yet when it comes to option dealing the concept is simplistic because it multiplies uncertainty you can't look at the portfolio anymore and see for example the shares are going up from 51 to 57 so this won't mean your income or loss is just 6 dollars of difference you choose from the same stock of options but you select an opportunity for a different price 50 55 60 cents and so on and you also choose a particular period to change the offer reading this fantastic book you'll learn
